

## 'i' will emPOWER the new generation of techs.

For as long as I can remember, the Holy Grail of IBM i computing has been to engage with the younger generations and to bring them into the safe and secure IBM i fold; and it has been a tough journey.

Until now! This just got a whole lot easier!

With the latest explosion of Open Source code running natively on IBM i and the groundswell of the national push in all education establishments in 'S.T.E.M.' (*Science, Technology, Engineering and Maths*) skills, we find ourselves at the forefront of modern IT delivery.

For the first time, we can offer world-beating and class-leading modern technologies that are both interesting and exciting to a wider and younger audience. The type of technologies that can leverage our robust, secure and reliable IBM i systems and Db2 databases - safely, controlled, protected and highly effective.

Once the domain of the Linux and WINTEL world, these often FREE technologies run on our POWER systems through our safe and trusted IBM i operating system.

i-UG is championing an unprecedented S.T.E.M. engagement aimed at Schools & youth groups, where we can offer skills, resources and opportunities to a whole new resource pool. If we succeed, we can exploit the new Open Source opportunities by leveraging this vast and enthusiastic skill pool.

So ask yourself, are you: -

Looking for new talent? It's all around you.

Looking for that 'Competitive Advantage'? IBM has delivered it on IBM i.

Looking for solid proof that IBM i running on POWER is right for your business?

Come along to i-UG International i-Power and see it all in action and leverage what i-UG is doing to bring the new generations into the IBM i fold.

It is both enlightening and reassuring, but don't worry, you won't have to wear a hoodie.
